

Table 1: Mundlak Mixed-Effects Models for Network Connectivity (1985-1995)

	Friends	Kin	Org. Mem.
Cultural Breadth (Within)	0.297**	0.229**	0.046
Education (Within)	0.081	0.202	0.053
Married (Within)	-0.507	0.855	-0.323
Children (Within)	0.131	0.269	-0.080
Big City (Within)	-0.592	-0.922	-0.102
Employed (Within)	-0.301	-0.192	0.037
Age (Within)	0.021	-0.026	0.001
Cultural Breadth (Between)	0.479**	0.215**	0.191**
Education (Between)	0.028	0.205*	0.087**
Married (Between)	-0.224	1.356**	0.168
Children (Between)	-0.044	0.089	-0.002
Big City (Between)	-0.207	0.093	-0.059
Employed (Between)	-0.648*	0.028	-0.051
Age (Between)	0.013+	-0.037**	0.004
Women	-0.699**	-0.468+	0.290**
White	-0.271	-0.347	0.344
Num. Observations	1509	1509	1509
Between-Person Variance	1.29	1.77	0.31
ICC (Between-Person Prop.)	0.28	0.35	

Wave fixed effects and threshold coefficients omitted for space.

SEs omitted for space.

+ $p < 0.1$, * $p < 0.05$, ** $p < 0.01$

Within-person variance for count/ordinal models is fixed by their theoretical link functions.
